# Ulfit

## Ulfit

Ulfit uses two ground-breaking technologies: Micro Focused Ultrasound and Macro Focused Circular Ultrasound for skin laxity and body contouring treatments. It can be used successfully on many problem areas of the face and body.

Ulfit is a simple treatment with low downtime that rejuvenates and delivers visible results.

## Clinical Cases

## FAQ

### Is Ulfit treatment right for me?

If you have wrinkles, fine lines or sagging skin on your face or neck, Ulfit treatment can help to tighten and rejuvenate your skin. Ulfit can also help to contour and tighten specific body areas. Because Ulfit Face Lifting targets various depths, even deep wrinkles can be improved using this treatment.

With the exception of a few medical contraindications, Ulfit is appropriate for all patients with aging concerns.

### How long does the treatment take?

Ulfit is equipped with rapid shot movement, making it highly precise and efficient in its treatment. Treatment times vary, depending on the area of treatment. Treatment for the entire face and body can be delivered in approximately 45 minutes. Treatment to individual areas of the face or body can be delivered in as little as 15 minutes.

### When will I see results?

Some people notice an immediate result after treatment, while most begin to see improvements 8 weeks after the first treatment. These results will continue to improve for up to 12 weeks.

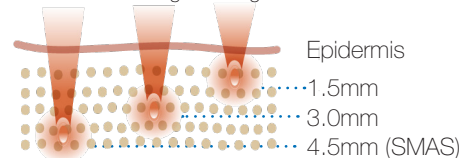

### Is Ulfit treatment uncomfortable?

Ulfit is specifically engineered with a system to minimise any discomfort during treatment. This enables maximum ultrasound emission power levels to be delivered comfortably, ensuring the best results from the treatment.

### Face Lifting

Three different settings can target various layers of the skin to provide targeted treatment and longer-lasting results.

### Body Contouring

The unique circular motion of the body cartridge covers large treatment areas efficiently and precisely to target the fat layer.

After three months.
