

Acne

Acne is a skin condition that causes a disorder in the activity of pilosebaceous follicles ("pores").

In normal conditions, sebaceous glands produce oil, which has the main function of lubricating and protecting the skin surface. In the case of acne, these glands produce more oil than normally, causing:

Obstruction of the follicle due to accumulation of oil and dead cells.

Proliferation of bacteria, with subsequent infection and inflammation.

Who does it effect?

Triggering Factors

genetic predisposition

stress

cosmetics and hygiene

hormonal changes

medicines

pollution and smoking

mesoestetic Pharma Group, committed since 1984 to the research and development of new dermo-cosmetic solutions.

🏠 home maintenance

Maximises and prolongs the results obtained in-clinic:

1/ hygiene

purifying mousse

150 ml
Daily cleansing mousse to purify and cleanse.

> *Moisten the skin, spread the foam, massage gently, remove with water.*

2/ topical treatment

acne one

50 ml
Cream for daily use. Exfoliates, reduces oil production, controls bacterial proliferation and redness.

> *Apply once or twice daily over the clean skin. Avoid the eye contour and mucous membranes.*

specific topical treatment

imperfection control

10 ml
Cream for focal use on blemishes. Includes pigments with an adaptive concealing effect.

> *Apply once a day. Massage to achieve the desired colour intensity.*

pure renewing mask

100 ml
Exfoliating and purifying face mask for weekly use

> *Leave on for 5 to 10 minutes. Moisten your hands, massage and remove with water.*

3/ photoprotection

mesoprotech® mineral matt antiaging fluid

50 ml
Daily sunscreen for very high protection. Essential to prevent the appearance of spots resulting in scars and acne lesions.

> *Apply several times a day, half an hour before sun exposure.*

Clinically proven results

The studies *in vivo* support progressive, long-lasting outcomes, visible since the first session.
