## mesoestetic®

## dermamelan®

Efficient cosmetic brightening method against skin blemishes caused by melanin.

## dermamelan pack® brightening method

- Maintenance cream. Complements the brightening process initiated by the dermamelan mask. Applied at home.

Mask with brightening ingredients. Intensive, integral treatment of all kinds of blemishes of melanic origin. Applied in clinic.

○ Cleaning and degreasing of skin prior to application of dermamelan mask to ensure better absorption of the active ingredients. Applied in clinic.

## dermamelan®

the **dermamelan®** method has been designed to reduce the appearance of blemishes caused by excess melanin in the skin.

Blemishes of melanic origin are a common skin concern. These blemishes have various origins, among which are: genetics, ethnic group, sex, pregnancy, oral contraceptive use, menopause, etc. Solar radicals are also triggering factors that increase the incidence of newly-appearing blemishes of melanic origin and the reappearance of blemishes already established.

## mechanism of action

The **dermamelan®** method acts within the skin to address the effects of excess pigmentation to

improve the appearance of unattractive skin blemishes

mesoestetic®

## properties

- Induces a quick brightening action
- Highly effective for all kinds of skin blemishes (melasma, chloasma, senile blemishes, pregnancy blemishes, sunspots, blemishes due to oral contraceptives, etc).
- The **dermamelan®** method can be initiated at any time of year, provided the patient uses the **mesoprotech melan 130 pigment control** on a daily basis, so as to permit exposure to the sun without negative effects on the blemishes being treated.
- **dermamelan®** is compatible with any skin phototype.

## results

During the first or second week of cosmetic treatment using the **dermamelan®** method, the skin will already show a substantial improvement. Blemishes being treated will tend to diminish and simultaneously the skin will start to show a brighter and rejuvenated look.

In 99% of cases involving blemishes or abnormal hyperpigmentation of epidermal origin, the blemish elimination process achieved a 95% efficacy rate

## application procedure

This cosmetic treatment comprises two phases: the first to be applied in clinic by a **dermamelan** trained professional and the second maintenance program to be applied at home.

- The cosmetic treatment is applied in clinic.
- After completion of the first phase, the **dermamelan treatment cream** should be applied at home to complete the cosmetic action being evoked in the area under treatment.

mesoestetic®

The treatment should always be rigorously complemented with the use of the **mesoprotech melan 130 pigment control** with regular applications throughout the day.

Use **hydracream fusion** and **hydratonic mist** before applying **dermamelan treatment cream**, to ensure the compatibility of products and the results of the treatment.

Use **hydra-vital factor k** cream during the cosmetic treatment to keep the skin properly hydrated.

For hydrating the eye contour, apply **energy C eye contour**.
